Mosley RV-4C (Since 1962)
"Best all around "

If you're cramped for space and looking for the finest in a self supporting vertical, here's an antenna designed with you in mind. Mosley RV Verticals for 4 or 5 band operation feature automatic band switching from the location of the transceiver. Each antenna utilizes the world famous "Trap-Master" traps. Undisputed and unaltered since their inception Mosley "Trap-Master" traps incorporate high 'Q' coils firmly fixed on molded forms. These high quality metal encased traps maintain resonant frequency stability on all bands under a wide variety of weather conditions. With a simplified base mounting technique no concrete footing is necessary. These heavy-duty verticals measure up to the most exacting commercial standards. Elements are swaged for extra strength and reduced wind load. Low angle, omni-directional radiation and minimum SWR (1.5/1 or better at resonance) assure maximum performance. Power is fed directly to antenna with a single 52 ohm coax line.

Add 75/80 Meters
Mosley RV-8C

Designed to convert the RV-4C antenna to include the 75/80 meter band. The LC circuit incorporates a high 'Q' coil constructed of #12 tinned copper wire. A vinyl coil housing, closed at one end, assures weather protection. An insulated aluminum condenser tube fits over the vertical element. Heavy-duty insulators maintain 'U' shaped matching section loop, and a matching section rod connects loop to coil.
